Renfert-Scanspray extra fine

NEW Matting spray

NEW Renfert-Scanspray extra fine

Matting spray

Thanks to its micro-fine, homogeneous structure, Renfert-Scanspray extra fine can be applied very thinly. Enhanced adhesion, especially on polished ceramics/metals and reflecting surfaces.

Advantages

- Thinner layer thickness ($< 1 \mu\text{m}$) and higher opacity compared to conventional scan sprays. This ensures more homogeneous and more detailed scanning results.
- High separation sharpness with detailed edge representation, especially on delicate structures, for precise scanning results.
- No flake and bubble formation (agglomeration), thus reduction of dimensional errors.
- Particularly good output due to very thin and micro-fine layer application.

PREMIUM QUALITY
MADE IN GERMANY

Micro-fine application for detailed scanning results

Left: uniform application of Renfert-Scanspray extra fine
Right: uneven coating with competitive products
